The Data Scientist's Toolbox Project (JHU) Coursera

Part 1

The Course Project for this course is pretty straightforward. Now that you've learned about the basic tools found in the data scientist's toolbox, we want to make sure that you've assembled those tools and are ready to begin using them. This easy project is your chance to demonstrate that you've done the basic software setup (R, RStudio, and Github) that will get you through the rest of the Data Science Specialization.

1. Install R
2. Install Rstudio
3. Open Rstudio and take a screenshot
4. Submit a screenshot of Rstudio open on your screen using one of these formats: png, jpg, gif, pdf

Part 2

Set up a Github account (you may use your own name or a pseudonym). Create a repo called datascience-coursera Submit the link to your GitHub account (or a direct link to your datasciencecoursera repo)

Part 3

1. Fork the data sharing repository here: https://github.com/jtleek/datasharing
2. Submit the link to the forked repository on your Github account.

Part 4

Create a text file called HelloWorld.md Add the line "## This is a markdown file" (without the quotation marks) to the document (without the quotation marks) Push the document to the datasciencecoursera repo you created on Github Submit the link to the HelloWorld.md file on your Github repo.
